

Why Do People Cooperate with the Police and Criminal Courts? A Test of Procedural Justice Theory in 30 Countries

Supporting materials, Section S8 (Part 2): R code and output for supplementary analysis

Jonathan Jackson, Jouni Kuha, Ben Bradford, and Mike Hough

May 2025

Introduction

This document shows the R code that was used for the supplementary analyses that are reported in Supplements S5-S7, and output from them.

The code starts from the point where we read in datasets and previous estimated models in a form which is ready for the analysis. Please see Supplement_S8_1 for information on how these data and results were obtained.

Supplement S5. Adding police-initiated contact to the models

```
library(lavaan)
library(rmeta)
library(lme4)

Supplement S6. Further comments on police effectiveness as a predictor of cooperation

```
#####
# Fitting the models:
# Here the models are fitted as shown in the code in Supplement S8 (Part 1),
# except that the model for cooperation is changed as follows:
# Full model (as in the main paper):
# coop~1+age+female+educ2+educ3+pj+eff+foc+obey+moralid
# (*) Only police effectiveness and demographic controls:
# coop~1+age+female+educ2+educ3+eff
# (*) + worry about crime and obligation to obey the police:
# coop~1+age+female+educ2+educ3+eff+foc+obey
# (*) + normative alignment
# coop~1+age+female+educ2+educ3+eff+moralid
# (*) + procedural justice
# coop~1+age+female+educ2+educ3+eff+pj

# The models were fitted and estimated coefficients saved earlier:
b.coop.on.eff <- readRDS("b_coop_on_eff.rds")
head(b.coop.on.eff)
```
